▼ GOOD INTESTINAL FLORA

DanWean® Modus has added benzoic acid and yeast products, precisely to maintain a good gastrointestinal flora. DanWean® Modus is used for piglets as the first mixture in the climate barn. Typically used at 6-10 kgs size. In addition to milk powder, DanWean® Modus has a high content of gentle protein sources.

▼ MAXIMUM FEED INTAKE

DanWean® Modus is designed so that the pigs without risk of gastrointestinal problems, can increase feed intake and prepare the way for good feed economy.

DanWean® Modus is composed so that there is balance between the individual nutrients. The piglets achieve a maximum feed intake and the risk of stomach and intestinal problems is greatly minimized

▼ THE BEST INGREDIENTS

The careful selection of gentle heat-treated raw materials contributes to the unique composition and balance of fiber, starch and protein. In this context, plasma protein in particular is a gentle source of growth. Vitamins, microminerals and amino acids are matched so that growth potential is met with this gentle feed.
