

Fishmeal substitute

ProtaSoy®

ProtaSoy® is a modern fishmeal substitute that gives pigs the best start in life. Make your mixes for piglets cheaper without compromising on either quality or content.

The product is recommended with a dosage of 4-5% of the finished mixture depending on need and well-being as well as previous fishmeal allocation.

▼ ADVANTAGES

Fishmeal use to be one of the most used and most important sources of protein in pig feed - especially for piglets.

The fishmeal was important because it is highly digestible and does not provoke diarrhea. However prices and availability of fishmeal can fluctuate a lot.

Therefore there is an increased demand for a stable and well balanced alternative protein source.

DanVits ProtaSoy® is an alternative to fishmeal well adapted to piglets and tested to make sure that the piglets like the product.

The well-balanced protein mix has a high content of amino acids and mi-

nerals, as well as omega 3 fatty acid.

ProtaSoy® is a modern protein feed with easy digestible protein components suitable for piglets.

ProtaSoy® is an optimized protein mixture adapted to piglets.

The piglets like the product, they eat well and the amino acids and minerals keep them healthy after weaning.

▼ REDUCE FEED CONSUMPTION

5 kg ProtaSoy® replaces 4 kg fishmeal and 1 kg grain.

ProtaSoy® adds more tryptophan than fishmeal to the mixture, which increases the piglets' appetite, reduces feed consumption and gives the piglets an easier start in life. Served with oatmeal and acid.

▼ HIGHLY DIGESTIBLE PROTEIN

ProtaSoy® will give your mix a strong quality boost. ProtaSoy® is composed of easily and highly digestible protein sources, amino acids and minerals. ProtaSoy® is a more economic than fishmeal.

▼ COMPOSITION

ProtaSoy® is also formulated to treat diarrhea upon weaning is reduced.

ProtaSoy® is used for pigs from weaning and up to 20 kg, where they are fed with two piglet mixtures and up to 30 kg, where only one mixture is fed.

The unique mixture is composed of a number of gentle protein sources, including potato protein, antigen-free soy supplemented with phosphorus, amino acids and minerals. The combination of these 2 proteins ensures a more ideal amino acid distribution than with other protein sources. It is well known that the content of the amino acid valine is much higher in potato protein than in fishmeal.
